INVESTMENT STRATEGY

- ❖ We look to safeguard your assets while providing a stable source of alpha.
- ❖ We utilize proprietary models & analytics to identify mispriced securities.
- ❖ We employ consistent valuation models & in-depth fundamental research to profit from significant market dislocations.
- ❖ We are value-oriented investors with a long-term investment horizon.
- ❖ We seek to fully understand the downside risk associated with each investment.

Our investment objective is to outperform the benchmark by 60 basis points, annualized, over an entire market cycle.

ABOUT OUR FIRM

DuPont Capital has a long history of institutional asset management. Our parent company, DuPont, established a retirement pension plan for employees in 1942, and in 1975 created a separate pension management division.

In 1993, DuPont Capital was established and became an SEC registered investment advisor. We share our parent company's history of innovation, and over the years, have been on the forefront of developing global investment opportunities in both traditional and alternative strategies across equity, fixed income, and alternative investments.

- DuPont Capital Management (DCM) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. DCM has been independently verified for the periods January 1, 1993 through December 31, 2015.
- Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The DCM Core Fixed Income composite has been examined for the periods April 1, 1999 (inception) through December 31, 2015. The verification and performance examination reports are available upon request.
- DCM is an investment adviser registered under the Investment Advisers Act of 1940. DCM is a wholly owned subsidiary of E. I. du Pont de Nemours and Company and specializes in institutional investment management services, utilizing a variety of investment strategies and styles. Registration does not imply a certain level of skill or training.
- DCM Core Fixed Income (inception date – 04/01/1999) includes all accounts that are invested primarily in investment grade U.S. debt securities utilizing a value-based strategy. The investments include U.S. Treasury, federal agency, mortgage-backed, asset-backed and corporate securities.
- The composite benchmark is the Barclays U.S. Aggregate Index, which covers the U.S. Dollar denominated, investment-grade, fixed-rate taxable bond market of the SEC registered securities. This index includes bonds from the U.S. Treasury, Government-Related, Corporate, MBS, ABS, and CMBS sectors. The returns for this index do not include any transaction costs, management fees or other costs. You cannot directly invest in this index. Benchmark returns are not covered by the report of independent verifiers.
- Performance results reflect the reinvestment of dividends and other earnings. Valuations are computed and performance is reported in U.S. dollars. Prior to July 2009, the Composite returns reflect income earned through participation in a securities lending program. DCM discontinued participation in the securities lending program after July 1, 2009. Composite returns are calculated net of non-reclaimable withholding taxes on dividends and interest income. Gross-of-Fees returns are presented before management and custodial fees but after all trading expenses. Net-of-Fees returns are calculated monthly by deducting 1/12th of the highest applicable fee rate in effect for the respective time period from the gross composite return. The DCM Core Fixed Income fee schedule is as follows: 0.32% first \$25 million, 0.28% next \$25 million, 0.25% next \$25 million, 0.22% next \$25 million, 0.18% thereafter.
- Securities and other instruments in which the composite invests may be denominated or quoted in currencies other than the U.S. dollar (Base Currency). Changes in foreign currency exchange rates can affect the value of an investor's account. This risk, generally known as "currency risk," means that a strong U.S. dollar (Base Currency) will reduce returns for investors while a weak U.S. dollar (Base Currency) will increase those returns.
- DCM routinely uses derivatives (i.e., exchange-traded treasury futures, options and currency forwards) to manage portfolio risks, reduce the cost of structuring the accounts, or to capture value disparities between financial instruments.
- DCM may invest client assets in securities that are not denominated in U.S. dollars. As a result, a client is subject to the risk that those currencies will decline in value relative to the value of the U.S. dollar. DCM may from time to time, seek to protect the value of some portion or all of the portfolio holdings against currency risk by engaging in currency hedging transactions. Currency hedging involves special risks including possible default by the other party to the transaction and illiquidity.
- The ex-post three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period.
- Internal dispersion is calculated using the equal-weighted standard deviation of annual gross returns of those portfolios that were included in the composite for the entire year. For those periods with five or fewer accounts included in the entire year, "N/A" is noted as the dispersion is not considered meaningful.
- Past performance is not indicative of future performance. It should not be assumed that results in the future will be profitable or equal to past performance. These performance disclosures apply to all of the DCM investment performance data presented herein.
- This composite was created in January 2000. A list of composite descriptions is available upon request as are policies for valuing portfolios, calculating performance, and preparing compliant presentations.
