

Real-time insight on how DuPont Capital has positioned its portfolios as a function of key factors driving the markets.

We believe country selection is critical to successful, risk-managed investing in Emerging Markets Debt. A key element of our approach is our proprietary country selection analytics. Our 7-factor country credit model generates a credit score for each country, which is used to assign the country to either the Mature, Stable, Risky, or Distressed credit categories. We then apply fair value criteria unique to each credit category to assess whether a country is under, over, or fairly valued. Our 'Focus List' contains bonds that are (i) under valued based on our valuation model, and (ii) have an attractive risk/reward profile. The list generally includes bonds from under valued countries and local currency bonds from select fairly valued countries.

The chart below represents the classification of U.S. Dollar denominated bonds based on the results of our modeling. Changes to the model from the previous quarter have been highlighted.

Key vs Prior Quarter: More Attractive Less Attractive Upgraded Downgraded

COMMENTS (as of April 1, 2019)

EMD UNIVERSE SLIGHTLY LESS ATTRACTIVE	Overall, there was increased movement in our Country model, but the percentage of undervalued countries remained similar to the end of the year at about 41%. The overvalued category increased.
BRAZIL AND COLOMBIA UPGRADED	Brazil and Colombia were upgraded to the lower-end of the "Mature" category. Due to this shift, Brazil moved into the Undervalued category
INDONESIA AND SOUTH AFRICA LESS ATTRACTIVE	Indonesia and South Africa were two of the larger countries that moved from undervalued to fair. This was due to the spreads of these countries moving tighter in the first quarter
