

## GLOBAL SMALL CAP (EX. US), STRUCTURED EQUITIES

*Juncai Yang, CFA, Portfolio Manager and Senior Investment Analyst*

The Global Ex US small cap strategy underperformed the benchmark by 88 bps for the quarter.

Based on Barra risk model, alpha impacts from industry and quant factor exposures were positive while impacts from country and non-barra factors were negative.

In the factor space, negative exposure to residual risk and positive exposure to momentum added alpha, while positive exposure to size and beta subtracted alpha. Relative performance from both value and growth were neutral.

We remain primarily focused on risk management. We continue our efforts on research of non-barra factors/drivers and try to avoid skewed shape of factor exposures or significant concentrations.

Within the portfolio, we still prefer good quality value with good sustainable growth in the long term. We are cautious on momentum and beta in the short term.
